

Where do I find this content on my DMG SERVER?

You must be running DMG software version 4.X in order to receive the EPKs. To locate available EPKs on your system, do the following:

1. Launch your DMG Receive Client.
2. When the main window displays, move to the left content pane, and click **News, Video News Feeds**.
3. From the list of Video News Feeds, double-click **EPKs**. The right pane refreshes and shows a series of tabs.
4. Click the **LIONSGATE** tab. A list of all the available clip reels are shown.

The screenshot shows the Pathfire Digital Media Gateway Security Administrator interface. The left pane displays a tree view with 'EPKs' selected under 'Video News Feeds'. The main pane shows a table of EPKs under the 'LIONSGATE' tab. The 'Film Clips' clip reel is selected, and a preview window is open showing a video player with a volume control and a script area.

Attachments	Story Number	Slug

[Icon]	Happily N'Ever After	Film Clips

The video preview window shows a character in a red and green outfit standing on a wooden platform. The video player includes a volume control (set to -3 dB), a play button, and a progress bar. The script area below the video player contains the following text:

```

Lionsgate
Sam Hurwitz Productions
Happily N'Ever After
Electronic Press Kit
12/12/06
TRT 53:16
  
```

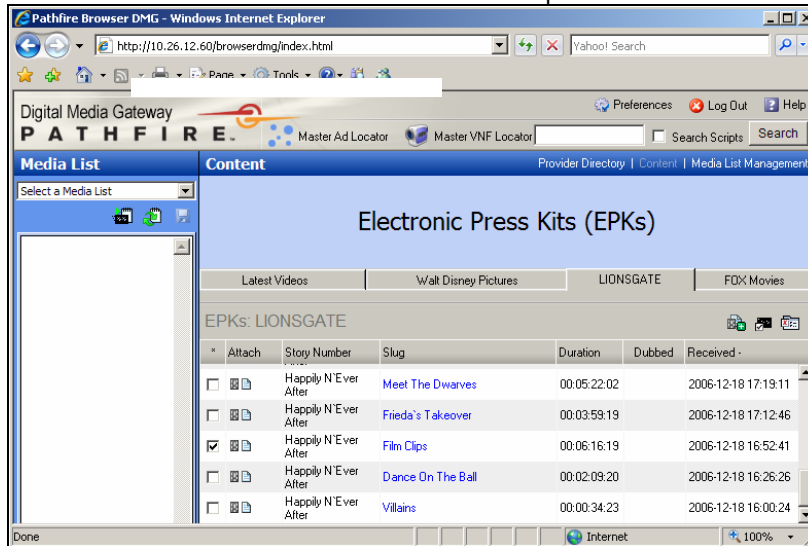

Stopped.

5. To preview a clip reel, double-click on the desired item in the list. The preview window displays (shown at right).
6. To dub the clip reel to a downstream device (e.g., VTR or play-to-air server), click and drag the selected clip reel to the *Destinations* section of the left pane.

Where do I find this content using BROWSER DMG?

You must be running DMG software version 4.X and Browser DMG 2.1 in order to receive the EPKs. To locate available EPKs on your system, do the following:

1. While viewing the Browser DMG page, click the **Provider Directory** link. The Provider Directory list displays.
2. Click **EPKs**. The page refreshes and the list of latest videos displays.
3. Click the **LIONSGATE** tab. A list of all available clip reels is shown.

4. To preview a clip reel, click on the **SLUG** name (shown in blue). The video preview window opens and the clip reel begins to play (shown at right).
5. To dub the desired clip reel to a downstream device (e.g., VTR or play-to-air server), click in the checkbox on the line containing the desired clip reel. Then click the **dub selected items icon**. The Dub Selected Items page displays (see below).
6. With the desired item still selected, locate the applicable device, and click the **red circle**.
